Western Blot, also known as immunoblotting, is a molecular biology technique that detects a certain protein in a complex sample based on the specific binding of antigens and antibodies. This method is an immunobiochemical technique developed on the basis of gel electrophoresis and solid phase immunoassay. Since immunoblotting has the high resolution of SDS-PAGE and the high specificity and sensitivity of solid phase immunoassay, it has become a routine technique for protein analysis. Western Blot is often used to identify a certain protein and can perform semi-quantitative analysis of the protein.

United States market for Western Blot Detection Kit is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
