The global Iodopyridines market size is predicted to grow from US$ 48.45 million in 2025 to US$ 78.72 million in 2032; it is expected to grow at a CAGR of 7.2% from 2026 to 2032.

Iodopyridines are a family of nitrogen-containing heteroaromatic compounds derived from pyridine, in which one or more ring hydrogen atoms are replaced by iodine. The most common members are the three monoiodinated isomers—2-iodopyridine, 3-iodopyridine and 4-iodopyridine—which are typical heteroaryl iodides and behave as highly reactive aryl iodides in cross-coupling chemistry.

Key upstream materials include pyridine and aminopyridines, iodine and iodinating agents (I? with oxidants, KI/I? systems), nitrite for diazotization, acids such as p-toluenesulfonic acid or sulfuric acid, and typical organic solvents and catalysts. Downstream, iodopyridines act as highly reactive heteroaryl iodide building blocks in cross-coupling chemistry and as key intermediates across several value chains.

In 2025, global sales of iodopyridines reached approximately 1,905 tons, with an average global market price of around US$ 26/kg. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 20% to 50%.

United States market for Iodopyridines is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Iodopyridines is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
