Medical disposable pipette is a measuring device used to accurately pipette a certain volume of solution. A pipette is a measuring-dispensing instrument used only to measure the volume of a solution it dispenses. It is a long, thin glass tube with an enlarged section in the middle. Its lower end is beak-shaped, and a marking line is engraved on the neck of the upper end, which is a sign of the exact volume to be removed.

According to our research, the global market for medical devices is estimated at US$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.
