Medical molecular sieve oxygen equipment refers to a specialized medical device used for oxygen therapy in healthcare settings. This equipment is designed to produce and deliver a high concentration of oxygen to patients who require respiratory support, typically due to medical conditions that affect their ability to breathe adequately. It operates on the principle of molecular sieve technology, which helps remove nitrogen and other impurities from the air, leaving behind highly purified oxygen for medical use.

According to our research, the global market for medical devices is estimated at US$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.
