CAR-M Cell Therapy is an immunotherapy based on chimeric antigen receptor (CAR)-modified macrophages. Macrophages are important cells in the immune system that have the ability to phagocytose and kill pathogens and tumor cells. In CAR-M Cell Therapy, specific CAR structures are introduced into macrophages through gene engineering techniques to enable them to specifically recognize and bind to tumor-associated antigens. These modified macrophages can more effectively recognize and attack tumor cells, thereby achieving tumor treatment. CAR-M Cell Therapy brings new breakthroughs in the field of tumor immunotherapy and provides more precise and effective treatment options for cancer patients.

United States market for CAR-M Cell Therapy is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
