PPR pipes are thermoplastic pipes which are manufactured from polypropylene random copolymer. They are ideal for drain, waste, ventilation and sewage applications. Due to their fusion welding and corrosion resistant properties, these pipes are extensively used in high pressure cold and hot water plumbing, and potable water supply systems. The demand for PPR pipes in Saudi Arabia is escalating as they are cost effective, environment friendly and offer numerous advantages over other piping systems.

The Saudi Arabia PPR market is growing on account of several growth-inducing factors. PPR pipes have high mechanical strength, easy workability, resistance to stray electrical currents and low density, owing to which these pipes are used in irrigation, plumbing and water distribution systems. Further, they offer high resistance against reactive chemicals, thereby being ideal for use in research facilities and chemical industries. Apart from this, Saudi Arabia provides various opportunities to PPR pipe manufacturers as it is the largest producer and exporter of polymers and chemicals globally.
