The demand for aluminum piping used for photoconductor drums of laser printers, requiring a superior surface quality, is ever rising. The extrusion and drawing process draws material through the narrow hole in a die without heating the extruded pipe, to provide a superior mirrored surface.Photoconductive drums are said to be the heart of laser printers and copying machines. High-precision drawn aluminum pipes are the materials used in such drums.

The increase in remote work and home offices has led to a surge in demand for printers. Individuals and businesses require printers for printing documents, reports, invoices, and other essential materials. The rise of remote work and home office setups contributes to the growth of the printer market. Continuous advancements in printing technology have enhanced the capabilities and performance of printers. Innovations such as faster printing speeds, higher resolutions, wireless connectivity, mobile printing, and improved inkjet and laser technologies increase the appeal and functionality of printers. The growth of e-commerce and online retail has expanded the need for shipping labels, packaging labels, and barcode printing. Logistics companies and online retailers require efficient and reliable printers for their shipping and labeling needs. The rise of e-commerce drives the demand for specialized printers. The adoption of 3D printing has been increasing across various industries, including manufacturing, healthcare, automotive, and aerospace. 3D printers enable the production of prototypes,
