Abstracts

The global Electronic Parking Brake Actuators market size is predicted to grow from US$ 290 million in 2025 to US$ 436 million in 2032; it is expected to grow at a CAGR of 6.1% from 2026 to 2032.

An Electronic Parking Brake (EPB) Actuator is a component of an electronic parking brake system in modern vehicles. Unlike traditional parking brake systems that use a mechanical lever or foot pedal to engage and disengage the brake, electronic parking brake systems employ electronic control for parking brake operation. The EPB actuator is responsible for applying and releasing the parking brake based on electronic signals from the vehicle"s control system.

Increasing Adoption of Electric and Hybrid Vehicles: The automotive industry"s shift toward electric and hybrid vehicles has been a significant driver for electronic parking brake systems, including EPB actuators. These systems align well with the advanced technologies used in electric and hybrid vehicle platforms.

Integration with Advanced Driver Assistance Systems (ADAS): EPB systems were increasingly being integrated with ADAS to enhance overall vehicle safety. The integration with sensor-based systems allowed for features such as automatic parking and hill-hold functions.

Market Expansion in Asia-Pacific: The Asia-Pacific region, particularly China, has been a significant market for automotive components. The demand for EPB actuators in this region was expected to grow, driven by the increasing production and sales of vehicles, including electric and hybrid models.

OEM Collaborations and Partnerships: Original Equipment Manufacturers (OEMs) in the automotive industry were forming collaborations and partnerships with suppliers and technology providers to integrate advanced braking systems into their vehicles. This collaborative approach aimed at incorporating the latest technologies efficiently.
