The global Asbestos-free Brake Pads market size is predicted to grow from US$ 9156 million in 2025 to US$ 15960 million in 2031; it is expected to grow at a CAGR of 9.7% from 2025 to 2031.

Asbestos-free brake pads are brake pads that do not contain any asbestos. Traditional asbestos brake pads produce dust containing heavy metal particles during the braking process, which can cause lung cancer when inhaled by the human body. Therefore, for environmental protection and employee health considerations, many countries prohibit the use of asbestos brake pads and replace them with asbestos-free brake pads.

Europe is one of the world's largest automotive brake pad markets, and strict enforcement of environmental regulations has promoted the widespread use of asbestos-free brake pads. The demand for asbestos-free brake pads in the European market has grown steadily, and this trend is expected to remain in the next few years. The market in the Asia-Pacific region is growing rapidly, especially in countries such as China and India. With the increase in the number of cars and the improvement of environmental awareness, the market demand for asbestos-free brake pads continues to rise. As an important market in the Asia-Pacific region, China's asbestos-free brake pad market is also expanding.
