Automotive Shredder Residue (ASR) Recycling refers to the process of recovering valuable materials from the non-metallic waste generated after end-of-life vehicles (ELVs) are shredded to extract metals. ASR primarily consists of plastics, rubber, glass, textiles, and residual metals. Advanced recycling techniques, including mechanical separation, pyrolysis, and chemical recycling, are used to recover usable materials, reduce landfill waste, and support a circular economy. ASR recycling helps meet environmental regulations, minimize waste disposal costs, and reclaim valuable resources for reuse in manufacturing, contributing to sustainability in the automotive industry.
