Abstracts

The global 6-Maleimidocaproic Acid market size is predicted to grow from US$ 15.88 million in 2025 to US$ 24.68 million in 2032; it is expected to grow at a CAGR of 6.6% from 2026 to 2032.

In 2024, global 6-maleimidocaproic acid production reached approximately 70 tons, with an average global market price of around US$ 215/kg.

6-Maleimidocaproic acid (CAS 55750-53-3) is a bifunctional small molecule linker bearing a thiol-reactive maleimide moiety at one end and a terminal carboxylic acid at the other. The maleimide selectively conjugates with sulfhydryl (–SH) groups of cysteine residues under mild conditions to form stable thioether linkages, while the carboxyl group can be activated to react with amines to form amide bonds — therefore 6-Maleimidocaproic acid serves as a versatile bifunctional building block for bioconjugation, linker assembly and polymer functionalization. Upstream materials and reagents for its manufacture typically include hexanoic/6-aminohexanoic starting blocks (or protected derivatives), maleic anhydride / maleic acid derivatives for installation of the maleimide ring, dehydration/dehydrative cyclization reagents (for maleimide formation) and standard coupling/activation reagents; isolation often involves crystallization and drying to protect the moisture-sensitive maleimide ring. Downstream, the compound is used as a feedstock or intermediate for antibody–drug conjugate (ADC) linkers, protein/peptide labeling reagents, PEG- or polymer-linked maleimide linkers, diagnostics/immunoassay probe synthesis, targeted drug-delivery linker construction and surface/material functionalization.

United States market for 6-Maleimidocaproic Acid is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
