A 60m?/h Large Fresh Air Volume Air Conditioner refers to a specialized climate control unit designed to supply a continuous flow of fresh, filtered outdoor air into indoor spaces at a rate of 60 cubic meters per hour. Unlike traditional air conditioners that primarily recirculate indoor air, this type integrates a fresh air ventilation system, improving indoor air quality by diluting pollutants, reducing CO? buildup, and maintaining optimal humidity levels. It is particularly beneficial in environments that demand enhanced air exchange, such as schools, offices, clinics, and residential spaces with limited natural ventilation. These air conditioners often feature multi-layer filtration (including HEPA or activated carbon filters), heat exchange capabilities, and energy-efficient operation. The “large” designation indicates suitability for medium to large rooms, ensuring a balanced indoor climate that supports comfort, health, and well-being.
