The global Aluminum Alloy Battery Bottom Cover market size is predicted to grow from US$ 1692 million in 2025 to US$ 4865 million in 2032; it is expected to grow at a CAGR of 16.6% from 2026 to 2032.

Aluminum alloy has a lower density, about one-third that of steel. The use of aluminum alloy materials to manufacture the lower casing of batteries can significantly reduce the overall weight of electric vehicles, thereby improving their energy efficiency and range. This is particularly important for the competitiveness of electric vehicles. Aluminum alloy has good strength and toughness, which can provide strong structural support for power batteries. In 2024 the production was 11.30 million units with an average price of US$133.

The aluminum alloy battery bottom cover has broad market prospects, driven by the rapid growth of the new energy vehicle industry and the accelerating trend of lightweight design. With excellent strength, thermal conductivity, and corrosion resistance, it is widely used in power battery systems.
