The global Containment Apparatus for Battery Tray Rack market size is predicted to grow from US$ 61.63 million in 2025 to US$ 115 million in 2032; it is expected to grow at a CAGR of 9.3% from 2026 to 2032.

In 2025, global sales of Containment Apparatus for Battery Tray Rack are estimated at approximately 420 units/sets, with the mainstream enterprise-side average price at around US$150,000 per unit/set. The gross margin of major manufacturers in the industry is approximately 28%–42%.

Containment Apparatus for Battery Tray Rack is a specialized automated equipment used in the back-end manufacturing process of lithium-ion battery. It is mainly used together with Battery Restraint Tray. Before and after cell formation, capacity grading, resting or testing, the equipment performs positioning, pre-pressing, pressing, locking, unlocking, pressure release and restraint release operations on the restraint tray. Its core function is not to directly carry the cell, but to automatically apply and release restraint on the tray already loaded with cell, so that prismatic cell, blade cell or pouch cell can maintain controlled pressure or controlled spacing during formation and capacity grading, and can be quickly released and transferred after the process is completed. Compared with manual pressing, manual locking or single fixture operation, Battery Restraint and Release Equipment features stable pressure control, consistent cycle time, high automation level and strong suitability for mass production. It is a key supporting equipment for restrained formation line, prismatic cell formation and grading line, and large-capacity energy storage cell post-processing line.

Its upstream supply chain mainly includes machine frame sheet metal, servo motor, reducer, lead screw, cylinder, hydraulic or gas-liquid booster system, pressure sensor,

displacement sensor, PLC, industrial control system, conveyor roller, clamping and positioning mechanism, tightening mechanism and safety protection component. These components require high standards in structural rigidity, positioning accuracy, pressure control accuracy, cycle stability and long-term operating reliability. Midstream participants mainly include lithium battery back-end equipment manufacturer, formation and grading equipment supplier, automation line integrator and non-standard automation equipment manufacturer. Downstream demand mainly comes from power battery, energy storage battery, and some consumer and light-duty battery manufacturer. With increasing requirements for restrained formation, consistency control and automated production efficiency in prismatic cell, blade cell and large-capacity energy storage cell, Battery Restraint and Release Equipment is gradually developing toward online operation, integrated design, high pressure-control accuracy, flexible compatibility and full-line coordination.
