An Arrester Porcelain Housing is a hollow insulating component made of high-strength electrical porcelain material. Its primary functions are to provide mechanical support, insulation protection, and heat dissipation channels for metal oxide varistor discs. Featuring a specially designed shed configuration, it ensures sufficient creepage distance even under polluted and humid conditions. This component must withstand continuous power-frequency overvoltages and switching impulses at rated voltage, with a bending strength of ?8 kN and passing the porosity test. It serves as a critical external insulating part that guarantees the safe operation of arresters in power grid substations and transmission lines during lightning strikes or switching overvoltages. The global market size for Arrester Porcelain Housings in 2024 is approximately US$583 million, with an annual sales volume of about 97.2 thousand units. The projected CAGR for the next five years is 3.8%. The average market price is approximately US$5,980 per unit, with a single production line capacity of 2,000-3,000 units per year, and the industry's gross margin is generally around 25%.
