Automotive hybrid battery busbar is a conductive connector used in hybrid and electric vehicle battery modules, made of high-conductivity copper or aluminum with a high-temperature insulation layer. It ensures efficient current transmission and reliable module connections, offering heat resistance, vibration resistance, corrosion resistance, and flexibility. Widely applied in battery modules, powertrains, and electronic systems, its market is steadily growing with increasing EV adoption and rising demands for safety and lightweight design. In 2024, the production volume of Automotive Hybrid Battery Busbars was 20 million units, with an average price of $13 per unit. The automotive hybrid battery busbar industry chain consists of upstream suppliers of high-conductivity copper or aluminum and insulation materials; the midstream involves busbar design, manufacturing, and insulation coating processes; and the downstream applications are in passenger and commercial vehicle battery modules and electronic systems, enabling efficient current transmission and module connections. The market is steadily growing with increasing electric vehicle adoption and rising demands for lightweight and safe designs. In 2024, a single production line had an annual capacity of about 3000 units, with an average gross margin of around 33%.
