An electric shut-off valve is an automated valve that controls the flow of fluids, such as water, gas, or oil, in a system through electrical signals. Unlike manual shut-off valves, electric valves are operated by electric motors or solenoids, allowing for remote or automated control. They are commonly used in industrial systems, home automation setups, and smart irrigation systems. Electric shut-off valves are often connected to sensors or control systems, enabling them to open or close based on specific conditions, like pressure changes, water leaks, or scheduled timings. They offer convenience, efficiency, and enhanced safety by quickly stopping the flow in case of an emergency or system malfunction, reducing the risk of damage or wastage. Regular maintenance ensures reliable performance.
