## Abstracts

The global Electronic Grade Cyclohexanone market size is predicted to grow from US$ 540 million in 2025 to US$ 869 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

In 2025, the global sales volume of electronic grade cyclohexanone is estimated at approximately 85,000 tons, with a mainstream ex-factory average price of about US$6.5/kg. The gross margin of major manufacturers in the industry is generally around 28%–42%.

Electronic grade cyclohexanone is a high-purity cyclohexanone solvent used in electronic manufacturing. Its chemical substance remains cyclohexanone, but the product focus has shifted from conventional industrial use to high purity, high cleanliness, and low impurity levels. Compared with industrial grade cyclohexanone used in the nylon value chain, coatings, inks, adhesives, and other fields, electronic grade cyclohexanone places greater emphasis on the control of metal ions, particles, moisture, organic impurities, and batch-to-batch stability. It is usually produced through distillation purification, dehydration, filtration, clean filling, and high-grade packaging to meet the requirements of electronic material production for solvent cleanliness, dissolving performance, and process stability.

The upstream of electronic grade cyclohexanone mainly includes industrial grade cyclohexanone feedstock, high-purity distillation and filtration materials, clean packaging containers, and quality testing systems. Industrial grade cyclohexanone is generally produced through cyclohexane oxidation or cyclohexanol dehydrogenation, and is further purified and clean-treated by electronic chemical manufacturers to form electronic grade products. Its downstream applications mainly include photoresist

solvent, cleaning and stripping solvent, electronic material solvent, and formulation solvent, serving semiconductor, display panel, photoresist, polyimide, and other electronic material manufacturing processes. The core product value lies in providing a stable, low-impurity, and controllable solvent system for high-end electronic manufacturing processes.

United States market for Electronic Grade Cyclohexanone is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
