The global Bimetal Thermostat market size is predicted to grow from US$ 251 million in 2025 to US$ 358 million in 2031; it is expected to grow at a CAGR of 6.1% from 2025 to 2031.

Bimetal Thermostats use two different kinds of metal to regulate the temperature setting. When one of the metals expands more quickly than the other, it creates a round arc, like a rainbow. As the temperature changes, the metals continue to react differently, operating the thermostat. This opens or closes the contact opener, turning the electricity on or off as needed. Accuracy and efficiency are important for bimetal thermostats.

The market for bimetal thermostats is currently experiencing steady growth with an expanding size and consistently increasing sales. Bimetal thermostats find extensive applications in various sectors such as household appliances, automotive, and industrial automation, providing accurate triggering of electrical switches in response to temperature fluctuations to safeguard devices from overheating or excessive cooling. Looking ahead, driven by ongoing technological innovations, bimetal thermostats are poised for significant advancements in energy efficiency, intelligent control, and are anticipated to capture a larger market share.
