A carbon-free waste gas abatement system is a system that, through specific technical means, enables no carbon emissions during the waste gas emission process. Its significance lies in completely eliminating carbon emissions caused by waste gas emissions from the source, contributing to the realization of low-carbon and even carbon-neutral goals. The carbon-free waste gas abatement system can significantly reduce the impact of greenhouse gas emissions on the environment and greatly improve environmental quality. Functionally, it employs advanced waste gas treatment technologies such as efficient physical adsorption and chemical reaction conversion to transform pollutants in the waste gas into harmless substances or achieve resource recovery and utilization, ensuring no carbon is generated during waste gas emission, meeting carbon-free emission standards, and being able to operate stably and reliably in various waste gas treatment scenarios.
