An articulated robot is a robot with rotary joints (e.g. a legged robot or an industrial robot). Articulated robots can range from simple two-jointed structures to systems with 10 or more interacting joints. They are powered by a variety of means, including electric motors. Articulated robotic systems usually have four to six axes, but they can have up to 10. These robots have more degrees of freedom than any other robots on the market, which gives the manufacturer more versatility and makes them more appealing.
