Infrared faucet is a faucet equipped with a proximity sensor and mechanism that opens its valve to allow water to flow in response to the presence of a user's hands in close proximity.

Infrared faucets are common in public washrooms, particularly in airports and hotels, where they reduce the transmission of disease-causing microbes. They can also be found in some kitchens and in the washrooms of some private residences. Other uses include providing drinking water to pets or livestock, whereby the presence of an animal activates the electronic sensor control allowing water to flow into a watering trough or dish.
