The global InGaAs Photodiodes for Monitoring market size is predicted to grow from US$ 76.3 million in 2025 to US$ 98 million in 2031; it is expected to grow at a CAGR of 4.3% from 2025 to 2031.

InGaAs photodiodes are optical detectors based on indium gallium arsenide (InGaAs) material, commonly used in monitoring applications, particularly in the near-infrared (NIR) spectrum. They offer excellent quantum efficiency and low noise characteristics, enabling them to effectively detect light signals in the range of 900 nm to 1700 nm. As a result, InGaAs photodiodes are widely used in fields such as optical communication. Due to the high photoconversion efficiency and fast response of InGaAs material, these photodiodes can operate in low-light conditions while providing highly accurate measurement results.
