The global Intelligent Connected Vehicle ECU market size is predicted to grow from US$ 27440 million in 2025 to US$ 42616 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

ECUs for intelligent connected vehicles are electronic control units designed for the Internet of Vehicles (IoV), intelligent driving, and software-defined vehicles. Comprising high-performance processors, memory, communication interfaces, security modules, and embedded software, they process data from vehicle sensors, the road environment, and cloud platforms to perform information fusion, real-time computation, network communication, and execution control. Key products in this category include vehicle gateways, cockpit domain controllers, intelligent driving domain controllers, zonal controllers, and central computing units.

The upstream sector primarily consists of suppliers of automotive chips, memory, communication modules, sensors, connectors, PCBs, and basic software; the downstream sector encompasses vehicle manufacturers, autonomous driving companies, IoV platform providers, automotive operators, and the maintenance and service market.

The global market for intelligent connected vehicle ECUs features an average unit price of $150, an annual sales volume of approximately 187 million units, and an industry profit margin of 25%.

The global market for intelligent connected vehicle ECUs is evolving toward high computing power, centralization, openness, and enhanced security. Traditional distributed control units will gradually be consolidated into domain controllers, zonal

controllers, and central computing platforms, utilizing automotive Ethernet for high-speed data transmission. As applications for intelligent driving, smart cockpits, and vehicle-road-cloud coordination expand, ECUs will enhance their capabilities in multi-sensor fusion, AI inference, and edge computing. Technologies such as hardware-software decoupling, AUTOSAR, proprietary operating systems, and OTA (Over-the-Air) updates will see accelerated adoption. Meanwhile, functional safety, cybersecurity, data privacy, and chip supply stability will emerge as critical competitive factors, driving manufacturers to transform from simple hardware suppliers into providers of integrated hardware-software platforms and continuous services.
