The global Laser Galvanometer Scanners for 3D Printing market size is predicted to grow from US$ 57.7 million in 2025 to US$ 122 million in 2031; it is expected to grow at a CAGR of 13.3% from 2025 to 2031.

The laser scanning galvanometer is a key optical device in 3D printing, mainly composed of three core components: X-Y optical scanning head, electronic drive amplifier and optical reflective lens. Among them, the X-Y optical scanning head is responsible for accurately controlling the deflection of the laser beam in the two-dimensional plane to ensure that the laser beam can scan along the predetermined path. The electronic drive amplifier plays the role of signal amplification, amplifying the weak signal provided by the controller to a level sufficient to drive the optical scanning head. The optical reflective lens is responsible for reflecting the laser beam, ensuring that the laser beam can be accurately and efficiently projected onto the 3D printing material, achieving high-precision scanning and curing.
