Abstracts

The global Lithium-ion Battery Sagger market size is predicted to grow from US$ 1835 million in 2025 to US$ 3373 million in 2032; it is expected to grow at a CAGR of 9.0% from 2026 to 2032.

Lithium-ion Battery Sagger refers to specialised high-temperature containers used to hold, protect and transport lithium-ion battery cathode or anode powders during calcination, sintering, carbonisation, graphitisation, purification and related thermal-treatment processes. The market is divided into Ceramic Saggers and Graphite Saggers. Ceramic Saggers are generally manufactured from mullite-cordierite, corundum, high-alumina, magnesia, zirconia, silicon carbide or other refractory ceramic systems and are primarily used in the calcination of LFP, LMFP, NCM/NCA, LCO, LMO and emerging cathode materials. Graphite Saggers are typically produced as monolithic or assembled boxes and vessels for the carbonisation, graphitisation and purification of artificial graphite, natural graphite, silicon-based anodes and other carbon materials. Cathode calcination commonly operates at approximately 900°C–1,300°C, while certain anode graphitisation processes require materially higher temperatures.

Key FindingsGlobal Lithium-ion Battery Sagger output reached 61.70 million units in 2025 with a weighted average price of US$30.4 per unitCeramic Saggers form the larger shipment base while Graphite Saggers support high-temperature anode-material processingChina is the largest regional market and the principal global manufacturing base for cathode and anode active materialsCathode calcination and anode carbonisation or graphitisation constitute the market’s two principal downstream demand streamsCompetition increasingly centres on service life, loading efficiency, contamination control, energy consumption and cost per production cycleMarket TrendsThe Lithium-ion Battery Sagger market is evolving from conventional refractory

+357 96 030922
info@marketpublishers.com

containers toward engineered thermal-processing components designed around specific powder chemistries, kiln structures and temperature profiles. Ceramic products are becoming thinner, lighter and more corrosion resistant through silicon-carbide formulations, high-purity oxide systems, composite coatings and optimised geometry. Saint-Gobain states that its thin-wall silicon-carbide PowerCeram saggers can increase cathode active material throughput by more than 10% per kiln and reduce energy lost in heating kiln furniture by more than 50% per kilogram of processed material. Graphite products are shifting from conventional monolithic boxes toward assembled structures, replaceable panels, high-purity materials and improved oxidation resistance, allowing customers to reduce whole-unit scrapping and maintenance costs. Customer evaluation is increasingly based on total cost per firing or graphitisation cycle rather than unit purchase price alone, with usable loading volume, product life, powder contamination, breakage rate and automated-handling stability becoming critical purchasing criteria. Longer-life saggers may reduce replacement volume per tonne of battery material, but they also support higher prices and increase the value contribution of customised products, coatings, lightweight designs and application-engineering services.Market DynamicsDriversThe primary demand driver is continued expansion in lithium-ion battery cathode and anode material production. China’s Ministry of Industry and Information Technology reported that domestic cathode and anode material output reached approximately 3.10 million tonnes and 2.00 million tonnes respectively in 2024, with both increasing by more than 20% year on year; output during the first four months of 2025 also recorded growth exceeding 40%. Each new powder-production line requires an initial stock of saggers and generates recurring replacement demand as products are exposed to thermal fatigue, molten-lithium corrosion, oxidation, deformation, cracking and mechanical damage. Continued LFP adoption in electric vehicles and stationary storage supports volume demand for Ceramic Saggers, while artificial graphite and emerging silicon-based anode production sustain demand for Graphite Saggers. Higher automation levels in roller hearth kilns, carbonisation furnaces and graphitisation lines also raise requirements for dimensional accuracy, structural consistency and resistance to handling damage, encouraging battery-material manufacturers to replace general-purpose kiln furniture with specialised Lithium-ion Battery Sagger products.RestraintsMarket expansion is constrained by longer product life, declining sagger consumption per tonne of processed material and persistent cost pressure throughout the battery supply chain. Improved ceramic formulations, protective coatings, higher graphite purity, assembled structures and better kiln operation allow each sagger to complete more production cycles before replacement. Some cathode-material producers also use rotary kilns or other continuous thermal processes that reduce reliance on traditional Ceramic Saggers. At the same time, excess capacity and weak profitability among battery-material manufacturers create pressure for lower

+357 96 030922
info@marketpublishers.com

procurement prices and require sagger suppliers to demonstrate measurable reductions in energy use, powder loss, breakage and downtime. Product performance is highly process specific: changes in cathode chemistry, lithium content, atmosphere, loading density, heating curve or kiln configuration can materially affect service life, meaning a product qualified for one customer cannot always be transferred directly to another. Lengthy qualification procedures limit rapid supplier substitution and increase development costs for both manufacturers and customers.OpportunitiesThe strongest opportunities are concentrated in high-performance Ceramic Saggers, long-life Graphite Saggers, emerging electrode materials and battery-supply-chain localisation outside China. Silicon-carbide, magnesia-rich, zirconia-containing, coated and gradient-structure Ceramic Saggers can address high-nickel cathodes, high-voltage LCO, solid-state materials and other applications requiring stronger corrosion resistance and tighter contamination control. Graphite suppliers can increase product value through assembled boxes, replaceable components, higher-purity grades, lightweight designs and oxidation-resistant treatments. New battery-material facilities in Europe, North America and Southeast Asia create opportunities for suppliers able to provide overseas qualification, local warehousing and application support, although China is expected to remain the dominant battery-component production base. Refurbishment, recycling and closed-loop recovery of spent ceramic and graphite products could become an additional service market as customers place greater emphasis on waste reduction and carbon footprint. Products that document lower cost per tonne of processed material are likely to gain procurement share even when their initial unit prices exceed those of conventional saggers.ChallengesThe industry faces significant challenges from raw-material and energy-price volatility, customer concentration, inconsistent operating standards and demanding product-performance trade-offs. Ceramic Saggers must balance thermal-shock resistance, mechanical strength, porosity, heat transfer and resistance to lithium-salt or transition-metal corrosion. Graphite Saggers must control density, purity, oxidation loss, machining accuracy, joint stability and dimensional change at elevated temperatures. Large-format products are vulnerable to damage during transport and automated loading, making local production and rapid replacement capabilities increasingly important. As average product life rises, replacement cycles may lengthen, requiring manufacturers to depend more heavily on new customer qualification, overseas expansion, advanced materials and market-share gains. Smaller suppliers also face difficulties funding formulation development, automated manufacturing, inspection equipment and long-duration customer trials. Capacity expansion ahead of stable customer certification may lead to low utilisation and inventory risk, while dependence on a limited number of large cathode or anode customers can expose suppliers to abrupt order changes and aggressive annual price negotiations.

Industry Chain Analysis

The upstream segment supplies alumina, mullite, cordierite, magnesia, zirconia, silicon carbide, clay binders and coating materials for Ceramic Saggers, together with petroleum coke, needle coke, coal-tar pitch, graphite blocks and other carbon materials for Graphite Saggers. Midstream production includes formulation development, mixing, moulding, pressing, extrusion, isostatic forming, drying, firing, graphitisation, precision machining, assembly, coating, inspection and dimensional control. Downstream customers include cathode active material manufacturers, artificial and natural graphite anode producers, silicon-based anode companies, battery-material pilot facilities and selected kiln-system contractors. Value is created through formulation expertise, product consistency, usable loading capacity, cycle life, contamination prevention and stable performance in automated production. Hunan Jinkai operates both mullite and graphite sagger capacity, Tianjin Trend provides powder-calcination saggers through multiple refractory-material and forming platforms, and Noritake combines refractory kiln furniture with lithium-ion battery firing equipment, illustrating the increasing importance of integrated material and process-engineering capabilities.

Segment Insights

By Type, the market is divided into Ceramic Sagger and Graphite Sagger. Ceramic Saggers account for the larger unit-volume segment because they are extensively used in cathode-material calcination and normally have a substantially lower unit price. Their competitive differentiation is determined by thermal-shock resistance, corrosion resistance, coating performance, wall thickness, loading efficiency and cycle life. Graphite Saggers represent a smaller shipment segment but have a materially higher value per unit due to greater material consumption, higher processing costs and precision-machining requirements. Monolithic and assembled graphite structures are both included within the Graphite Sagger category, while carbon-based composite products remain an emerging technical route and can be captured within this broader segment until a stable standalone commercial market develops. The global weighted average price of US$48.7 per unit is therefore a blended market indicator rather than a representative quotation for either Ceramic Saggers or Graphite Saggers. By Application, the market should be classified into Lithium-ion Battery Cathode and Lithium-ion Battery Anode, removing the duplicated application entries in the preliminary framework. The cathode segment covers LFP, LMFP, NCM/NCA, LCO, LMO and emerging cathode materials and is primarily served by Ceramic Saggers. The anode segment covers artificial graphite, natural graphite, silicon-based anodes and other carbon materials and is principally served by Graphite Saggers during carbonisation,

+357 96 030922
info@marketpublishers.com

graphitisation and purification. Although limited cross-application use exists, this two-segment structure remains the clearest MECE framework because it reflects different materials, operating temperatures, kiln technologies, replacement mechanisms and pricing models.

Downstream Market Opportunities

Cathode-material producers remain the largest customer group by unit demand, with LFP production supporting high-volume Ceramic Sagger consumption and high-nickel NCM/NCA or high-voltage LCO creating stronger demand for coated, silicon-carbide, magnesia-rich and low-contamination products. The anode-material segment provides the principal demand base for Graphite Saggers, particularly in artificial graphite carbonisation, graphitisation and purification. Silicon-carbon anodes and other next-generation materials may increase demand for higher-purity containers and more tightly controlled thermal environments. Solid-state electrolyte and advanced cathode pilot lines represent smaller but technically attractive opportunities because customers place greater value on chemical compatibility, contamination control and customised dimensions. Suppliers that participate in material formulation, kiln commissioning, loading optimisation and process troubleshooting are more likely to secure long-term supply relationships than companies competing solely through standard products and low prices.

Regional Insights

China is the largest production, consumption and manufacturing region for Lithium-ion Battery Saggers. It supplies approximately 85% of global cathode active materials and more than 90% of anode active materials, creating dense demand clusters and a broad domestic supplier base covering standard Ceramic Saggers, advanced ceramic products and Graphite Saggers. The Chinese market is characterised by large order volumes, short delivery distances, rapid product customisation and intense price competition. Japan and South Korea maintain important positions in high-specification cathode materials, advanced ceramics and integrated kiln-process engineering. Europe and North America currently have smaller shipment volumes but generally higher technical-service requirements and greater interest in local supply security. Southeast Asia is becoming a potential growth region as Chinese, Korean and Japanese companies establish battery and battery-material capacity, although local sagger production remains limited and many projects continue to rely on imported products during initial operation and qualification.

info@marketpublishers.com

Competitive Landscape Analysis

The competitive landscape combines specialised Chinese manufacturers with diversified European and Japanese refractory or advanced-material groups. Hunan Jinkai is a major Chinese supplier with disclosed annual capacity of 6.6 million mullite saggers and 0.4 million Graphite Saggers, supported by two production bases and a broad battery-material customer portfolio. Saint-Gobain competes through thin-wall silicon-carbide PowerCeram products, while Noritake combines sagger supply with lithium-ion battery firing and powder-handling solutions. Tianjin Trend, Hunan Dejingyuan, Yangquan Yinyu New Materials and Yixing Yinhu Refined Graphite Products represent important specialised or regional manufacturing participants. The enhanced supplier pool also includes Suzhou Mocheng and Guangdong Sunmore in Ceramic Saggers and Shaanxi Sanyi High-tech Graphite New Materials and Huixian Wuxing Graphite Products in Graphite Saggers; Shaanxi Sanyi discloses annual capacity of 300,000 graphite sagger-crucible sets, while Huixian Wuxing states annual capacity of 200,000 sets. Morgan Advanced Materials is more appropriately positioned as a long-life Ceramic Sagger technology-development participant, while direct evidence of large-scale commercial battery-sagger shipments remains limited. TYK Corporation, Xiamen Zhongke Jingyuan and Hebei Zhongci North New Materials can be retained in the extended supplier pool, but their public evidence of stable Lithium-ion Battery Sagger shipments is less comprehensive than that of the core manufacturers. Competition increasingly depends on customer qualification, product life, consistency, local service and cost per thermal-processing cycle rather than nominal capacity alone.

Report Scope

LP Information, Inc. (LPI) ' newest research report, the “Lithium-ion Battery Sagger Industry Forecast” looks at past sales and reviews total world Lithium-ion Battery Sagger sales in 2025, providing a comprehensive analysis by region and market sector of projected Lithium-ion Battery Sagger sales for 2026 through 2032. With Lithium-ion Battery Sagger sales broken down by region, market sector and sub-sector, this report provides a detailed analysis in US$ millions of the world Lithium-ion Battery Sagger industry.

This Insight Report provides a comprehensive analysis of the global Lithium-ion Battery Sagger landscape and highlights key trends related to product segmentation, company formation, revenue, and market share, latest development, and M&A activity. This report also analyzes the strategies of leading global companies with a focus on Lithium-ion Battery Sagger portfolios and capabilities, market entry strategies, market positions, and

+357 96 030922
info@marketpublishers.com

geographic footprints, to better understand these firms' unique position in an accelerating global Lithium-ion Battery Sagger market.

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for Lithium-ion Battery Sagger and breaks down the forecast by Type, by Application, geography, and market size to highlight emerging pockets of opportunity. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global Lithium-ion Battery Sagger.

This report presents a comprehensive overview, market shares, and growth opportunities of Lithium-ion Battery Sagger market by product type, application, key manufacturers and key regions and countries.

Key Questions Addressed in this Report

What is the 10-year outlook for the global Lithium-ion Battery Sagger market?

What factors are driving Lithium-ion Battery Sagger market growth, globally and by region?

Which technologies are poised for the fastest growth by market and region?

How do Lithium-ion Battery Sagger market opportunities vary by end market size?

How does Lithium-ion Battery Sagger break out by Type, by Application?

Contents

1 SCOPE OF THE REPORT

1.1 Market Introduction
1.2 Years Considered
1.3 Research Objectives
1.4 Market Research Methodology
1.5 Research Process and Data Source
1.6 Economic Indicators
1.7 Currency Considered
1.8 Market Estimation Caveats

2 EXECUTIVE SUMMARY

2.1 World Market Overview
  2.1.1 Global Lithium-ion Battery Sagger Annual Sales 2021-2032
  2.1.2 World Current & Future Analysis for Lithium-ion Battery Sagger by Geographic Region, 2021, 2025 & 2032
  2.1.3 World Current & Future Analysis for Lithium-ion Battery Sagger by Country/Region, 2021, 2025 & 2032
2.2 Lithium-ion Battery Sagger Segment by Type
  2.2.1 Ceramic Sagger
  2.2.2 Graphite Sagger
  2.2.3 Lithium-ion Battery Sagger Sales by Type
    2.2.3.1 Global Lithium-ion Battery Sagger Sales Market Share by Type (2021-2026)
    2.2.3.2 Global Lithium-ion Battery Sagger Revenue and Market Share by Type (2021-2026)
    2.2.3.3 Global Lithium-ion Battery Sagger Sale Price by Type (2021-2026)
2.3 Lithium-ion Battery Sagger Segment by Height
  2.3.1 Height ?100 mm
  2.3.2 Height >100 mm
  2.3.3 Lithium-ion Battery Sagger Sales by Height
    2.3.3.1 Global Lithium-ion Battery Sagger Sales Market Share by Height (2021-2026)
    2.3.3.2 Global Lithium-ion Battery Sagger Revenue and Market Share by Height (2021-2026)
    2.3.3.3 Global Lithium-ion Battery Sagger Sale Price by Height (2021-2026)
2.4 Lithium-ion Battery Sagger Segment by Application
  2.4.1 Lithium-ion Battery Cathode
