An oxygen therapy nasal cannula is a lightweight, flexible tube; one end connects to an oxygen source, while the other features two small nasal prongs inserted into the patient's nostrils to deliver oxygen directly. It is the most widely utilized low-flow oxygen delivery device, suitable for patients requiring long-term oxygen therapy?such as those with Chronic Obstructive Pulmonary Disease (COPD) or heart failure?and offers advantages such as comfortable wear and the ability to move freely.

The upstream sector primarily comprises suppliers of raw materials?such as medical-grade PVC and silicone?as well as manufacturers of equipment, including connectors and catheter extrusion machines. The downstream sector encompasses general hospitals, specialized hospitals, community health centers, and home care settings; sales are realized through medical device tendering and procurement, distribution by pharmaceutical trading companies, and online retail channels, serving patients in respiratory medicine, emergency departments, ICUs, and home oxygen therapy programs. Globally, the average unit price for oxygen therapy nasal cannulas stands at $1.20 per unit, with an annual sales volume of approximately 1.06 billion units. The global production capacity is 1.2 billion units, and the industry profit margin is 15%.

United States market for Nasal Cannula for Oxygen Therapy is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
