The global Direct Acting Safety Valve market size is predicted to grow from US$ 1446 million in 2025 to US$ 2374 million in 2031; it is expected to grow at a CAGR of 8.6% from 2025 to 2031.

A direct acting safety valve is a type of safety valve that opens under the direct action of the working medium. That is, it relies on the force generated by the pressure of the working medium to overcome the mechanical load exerted on the valve disc by springs, weights, etc., causing the valve to open. It has the advantages of simple structure, rapid action and good reliability. However, due to its reliance on mechanical loading, the magnitude of its load is limited, so it cannot be used in high-pressure and large-diameter applications.

United States market for Direct Acting Safety Valve is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Direct Acting Safety Valve is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
