The global Non-Intrusive Pipe Thickness Monitor market size is predicted to grow from US$ 34.1 million in 2025 to US$ 46 million in 2031; it is expected to grow at a CAGR of 5.1% from 2025 to 2031.

Non-Intrusive Pipe Thickness Monitor is a device or system that measures the thickness of a pipe wall without making direct contact with the inside of the pipe. It typically consists of sensors, a data acquisition module, a data transmission module and a data analysis and processing module. It uses technologies like ultrasonic, laser, eddy current or spectral confocal techniques. The sensors obtain physical signals related to pipe thickness from outside the pipe. The data acquisition module collects these signals and the data transmission module sends them to the analysis and processing module, which calculates and presents the pipe thickness data and its changes, helping to evaluate the pipe's structural integrity and health condition. It's widely used in industries like chemical, petroleum and power.

United States market for Non-Intrusive Pipe Thickness Monitor is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
