In electronics and electrical engineering, a fuse is an electrical safety device that operates to provide overcurrent protection of an electrical circuit. Its essential component is a metal wire or strip that melts when too much current flows through it, thereby stopping or interrupting the current. It is a sacrificial device; once a fuse has operated it is an open circuit, and must be replaced or rewired, depending on its type. Outdoor Fuses refers to Fuses used in outdoor fields. An outdoor circuit breaker is an electrical device used to protect the power system. It is usually installed outdoors to control and protect electrical equipment in power transmission and distribution systems to avoid damage caused by current overload and power failure.
