The global Electrochemical Gas Detector market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

An electrochemical gas detector is a safety device that uses electrochemical sensing technology to detect gas concentrations. It is widely used in various environments, including industrial, commercial and residential, to monitor and alarm information about the presence of gas to ensure the safety of people and property. Electrochemical sensors are the core components of electrochemical gas detectors. They contain one or more electrochemical cells, usually redox reaction cells. When the gas to be measured enters the sensor, the gas reacts chemically with the active material in the electrochemical cell. These reactions cause changes in current or potential, which in turn reflect changes in gas concentration.
