Finger-Palm Synergistic Soft Gripper refers to a type of soft robotic end-effector that mimics the coordinated movement between human fingers and palm to achieve adaptive, compliant, and secure grasping. By integrating flexible actuators and deformable structures in both the fingers and the palm, this gripper can conform to objects of varying shapes and sizes, enhancing contact stability and load distribution. The finger-palm synergy enables efficient envelope grasping, making it highly suitable for delicate object handling, unstructured environments, and human-robot interaction tasks.
