Flame Graphite Furnace Integrated Atomic Absorption Spectrophotometer is an advanced analytical instrument that integrates flame atomic absorption and graphite furnace atomic absorption. It is based on the fact that when light with the characteristic wavelength of the element to be measured is radiated from the light source and passes through the sample atomic vapor, it is absorbed by the ground state atoms of the element to be measured in the vapor, and the content of the element to be measured is determined by the degree of light absorption. The flame graphite furnace integrated atomic absorption spectrophotometer includes light source, atomization system, optical system, detection system, data processing system and other parts. It has the characteristics of high precision and reliability, simple operation, convenient data management and strong scalability. It is widely used in chemical industry, metallurgy, petroleum, medicine, agriculture, environmental protection, food and other industries.
