The global Fluorescent X-ray Coating Thickness Gauge market size is predicted to grow from US$ 65.2 million in 2025 to US$ 98 million in 2031; it is expected to grow at a CAGR of 7.0% from 2025 to 2031.

The working principle of the X-ray fluorescence coating thickness gauge is based on the X-ray fluorescence effect. The instrument will emit a beam of high-energy X-rays to the surface of the object to be measured. These X-rays interact with the atoms in the sample, causing the atoms to absorb the energy of the X-rays and be excited, releasing secondary X-rays (fluorescence radiation). Each chemical element releases X-rays of a specific energy, so by measuring the characteristic energy and intensity of these released secondary X-rays, the X-ray analyzer can perform qualitative and quantitative analysis of the coating thickness and composition of the material being measured.

United States market for Fluorescent X-ray Coating Thickness Gauge is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
