The acoustic genome shearing instrument is an advanced analytical instrument, mainly used in research in the fields of biology, basic medicine, clinical medicine, preventive medicine and public health. The acoustic genome shearing instrument is a technological innovation based on traditional ultrasonic processing. It uses a spherical solid-state ultrasonic transducer to focus the sound waves on the sample area in three dimensions. The focused sound waves can obtain good processing effects with energy input at different angles, thus avoiding excessive sample processing and thermal damage that may be caused by the non-aggregation of traditional ultrasonic energy.
