Frameless Glass Canopies are a modern building component that consists of high-strength tempered glass and hidden support structures (such as stainless steel tie rods, clamps or point support systems) and is used to cover areas such as porches, entrances or terraces. The frameless design of the canopy abandons the use of traditional frames, giving the glass a suspended visual effect, which can block rain and ultraviolet rays while maintaining the simplicity and transparent beauty of the building's facade. The high strength and durability of tempered glass ensure the safety of the canopy when it is subjected to wind and snow loads. At the same time, the specially treated glass is also weather-resistant, waterproof and self-cleaning, suitable for use in a variety of environments.
