Vacuum excavation, also referred to as hydro excavation or Non-Destructive Digging, is the process of combining high-pressure water with an air vacuum. Vacuum excavators are used to remove unwanted material from an area, mainly mud, dirt and slurry from around underground utilities.

Suction Excavation Trucks (which are also known as Vacuum excavation trucks, sucker trucks, suction excavators, vacuum excavatoror vac trucks) are primarily used to safely excavate around cable networks and buried pipelines. Vac trucks can also be used for emergency repair of utility and pipeline networks, rail track maintenance, deep excavation, confined spaces, sewer clearance, clearing around tree roots, basement work and more. They’re also commonly used for environmental maintenance, including clearing away any environmental damage and cleaning blocked gullies and gutters on the street.
