Abstracts

The global Goods-to-Person (G2P) Picking System market size is predicted to grow from US$ 644 million in 2025 to US$ 2248 million in 2032; it is expected to grow at a CAGR of 21.2% from 2026 to 2032.

Goods-to-person picking systems represent a significant evolution of "goods-to-person" picking technology. Unlike the traditional "person-to-goods" model, where workers must navigate between shelves to find products, this system uses automated equipment to transport boxes containing goods directly from the automated warehouse to fixed picking workstations. Operators simply wait at their workstations for the boxes to arrive and then pick them. This model fundamentally eliminates the significant time wasted by workers walking aimlessly within the warehouse, concentrating human resources on the core picking operations. In terms of system composition, a typical goods-to-person picking system usually consists of core modules such as high-density automated racking, storage and retrieval robots (e.g., shuttles and elevators), automated guided vehicles (AMRs), conveyor lines, and intelligent scheduling software.

United States market for Goods-to-Person (G2P) Picking System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Goods-to-Person (G2P) Picking System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Goods-to-Person (G2P) Picking System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
