Abstracts

The global layered double hydroxide market is projected to grow from USD 0.81 billion in 2025 to USD 1.22 billion by 2030, at a CAGR of 8.5% during the forecast period. The market is experiencing strong growth due to its widespread use in various sectors, including construction, pharmaceuticals, polymers, water treatment, and other sectors. There is a growing need for flame retardants, catalysts, and adsorbents. Furthermore, environmental regulations and the global shift toward sustainable materials are driving the adoption of LDH.

“Electronics segment, by end-use, is estimated to account for the second largest share during the forecast period in terms of value.”

The electronics segment is projected to hold the second-largest share in the layered double hydroxide market by value during the forecast period, primarily driven by their exceptional performance in advanced energy storage applications. Due to their highly tunable composition, unique layered structure, and excellent electrochemical properties, layered double hydroxides are being adopted as high-performance electrode materials in next-generation supercapacitors and batteries, offering improved energy density and cycling stability, which are crucial for compact electronic devices.

“By application, the catalysts & precursors segment accounted for the second largest share during the forecast period in terms of value.”

The catalysts & precursors segment is anticipated to hold the second-largest share in terms of value in the layered double hydroxide market during the forecast period, due to their tunable composition, high surface area, and exceptional anion-exchange properties, which make them highly effective as both catalysts and catalyst supports. Their layered structure enables the controlled incorporation of active metals, resulting in superior performance in oxidation, hydrogenation, and polymerization reactions. LDHs are also increasingly valued as green precursors for mixed metal oxides, supporting sustainable and energy-efficient chemical processes. With rising demand for clean technologies, renewable energy solutions, and industrial catalysts, LDHs are becoming an indispensable material in the catalysts and precursors segment.

“By grade, the rubber segment accounted for the second largest share during the forecast period in terms of value.”

The portable device segment is anticipated to hold the second-largest share in terms of value in the layered double hydroxide market during the forecast period, as it serves as a stabilizer, flame retardant, and reinforcing filler in synthetic and natural rubber formulations. Their ability to neutralize acidic residues, improve thermal stability, and enhance mechanical properties makes them highly effective in applications such as automotive components, industrial rubber goods, and footwear. The rubber-grade LDHs are a key contributor to market expansion, particularly in sectors that emphasize sustainability and performance.

“The North America region is estimated to account for the second largest share during the forecast period in terms of value.”

The North America region is estimated to account for the second-largest share in terms of value in the layered double hydroxide market during the forecast period, driven by advancements in infrastructure, industrial modernization, and the increasing push for sustainable materials. In the US, demand is accelerating due to the rapid expansion of electric vehicle (EV) battery manufacturing, stringent environmental regulations for water treatment, and the rising use of flame-retardant additives in construction. Canada’s market is supported by large-scale investments in the power sector and the growing need for efficient wastewater treatment. At the same time, Mexico benefits from agricultural modernization, sustainable fertilizer demand, and construction activities. Collectively, these factors are positioning North America as a key growth hub for the market.

Profile break-up of primary participants for the report:

By Company Type: Tier 1 – 65%, Tier 2 – 20%, and Tier 3 – 15%

By Designation: Directors– 25%, Managers– 30%, and Others – 45%

By Region: North America – 30%, Asia Pacific – 40%, Europe – 20%, Middle East & Africa – 7%, and South America – 3%

Kyowa Chemical Industry Co., Ltd. (Japan), CLARIANT (Switzerland), DOOBON (South Korea), Shandong Repolyfine Additives Co., Ltd. (China), Sakai Chemical Industry Co., Ltd. (Japan), Sasol (South Africa), and Saekyung Chemical Co., Ltd. (China) are some of the major players operating in the layered double hydroxide market.

Research Coverage:

The report defines segments and projects in the layered double hydroxide market based on product type, grade, type, form, distribution channel, application, end-use, and region. It provides detailed information on the significant factors influencing the market's growth, including drivers, restraints, opportunities, and challenges. It strategically profiles layered double hydroxide manufacturers, providing a comprehensive analysis of their market shares and core competencies.

Reasons to Buy the Report:

The report is expected to help the market leaders/new entrants by providing them with the closest approximations of revenue numbers of the layered double hydroxide market and its segments. This report is also expected to help stakeholders gain a deeper understanding of the market's competitive landscape, acquire valuable insights to enhance their business positions, and develop effective go-to-market strategies. It also enables stakeholders to understand the market's pulse and provides information on key market drivers, restraints, challenges, and opportunities.

The report provides insights into the following pointers:

Analysis of critical drivers (growth in water and wastewater treatment applications, growing demand for efficient and sustainable catalysts, and growth in carbon capture and environmental remediation efforts), restraints (high production and processing costs, and competition from cheaper and established alternatives), opportunities (advancements of nanostructured LDH materials,

and growth in advanced drug delivery solutions), and challenges (safety and regulatory constraints) influencing the development of the layered double hydroxide market

Product Development/Innovation: Detailed insights on upcoming technologies, research & development activities in the layered double hydroxide market

Market Development: Comprehensive information about lucrative markets – the report analyses the layered double hydroxide market across varied regions

Competitive Assessment: In-depth assessment of market shares, growth strategies, and product offerings of leading players such as Kyowa Chemical Industry Co., Ltd. (Japan), CLARIANT (Switzerland), DOOBON (South Korea), Shandong Repolyfine Additives Co., Ltd. (China), Sakai Chemical Industry Co., Ltd. (Japan), Sasol (South Africa), and Saekyung Chemical Co., Limited (China) in the layered double hydroxide market
