Janus kinase inhibitors are a class of drugs that selectively or non-selectively block the activity of Janus kinase (JAK) family members, including JAK1, JAK2, JAK3, and TYK2, thereby disrupting the JAK-STAT signaling pathway. This pathway plays a critical role in inflammatory responses, immune cell differentiation, and hematopoiesis. By suppressing excessive cytokine signaling and abnormal immune activation, JAK inhibitors have been widely applied in the treatment of autoimmune and inflammatory diseases such as rheumatoid arthritis, psoriatic arthritis, ulcerative colitis, and atopic dermatitis, as well as hematological disorders such as myelofibrosis and polycythemia vera. In 2024, the global sales volume of Janus kinase inhibitors reached 8.52 million Units, with an average price of USD 355 per Unit.
