A manual lever hoist is a mechanical device used for lifting and pulling heavy loads. It consists of key components like a lever handle, sprocket, chain, and hook. Operators manually operate the lever handle to make the sprocket rotate, which then drives the chain to move up or down, enabling the hoisting or pulling of objects. It comes in various types based on different classifications. For instance, classified by load capacity, there are light-duty ones suitable for lighter tasks in home or small workshops, medium-duty ones for common factory and construction site work, and heavy-duty ones for heavy industrial applications like port handling. Structurally, there are standard ones with common designs, compact ones for use in narrow spaces, and double-speed ones for better efficiency and load control. Moreover, depending on application scenarios, it can be divided into industrial ones for factory production, construction ones for building projects, marine ones for ship-related work, and mining ones for the harsh environment underground in mines. Overall, it plays a crucial role in many fields where manual lifting and pulling of heavy items are required.
