Medical Gas Terminal Supply Unit is a system that provides a secure, standardized interface between the central medical gas supply and the patient care equipment or area. It ensures the safe and controlled delivery of medical gases such as oxygen, nitrous oxide, and medical air, while maintaining proper flow and pressure regulation. These units typically include components like gas outlets with self-sealing joints, comprising a self-sealing gas socket and a medical gas probe. When the probe is inserted, it opens a valve to allow the gas to flow, and when removed, a flexible element in the socket closes the valve to prevent gas release. Designed to meet stringent healthcare standards, Medical Gas Terminal Supply Units are compatible with a variety of medical devices and systems, providing both reliability and safety in healthcare settings. Medical Gas Terminal Supply Unit can cost between $10 and $50.
