Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Membrane Oxygenator market.

A membrane oxygenator is a device used to add oxygen to, and remove carbon dioxide from the blood. It can be used in two principal modes: to imitate the function of the lungs in cardiopulmonary bypass (CPB), and to oxygenate blood in longer term life support, termed extracorporeal membrane oxygenation, ECMO. A membrane oxygenator consists of a thin gas permeable membrane separating the blood and gas flows in the CPB circuit; oxygen diffuses from the gas side into the blood, and carbon dioxide diffuses from the blood into the gas for disposal.

Global key players of membrane oxygenator include Medtronic, LivaNova, Terumo, etc. The top three players hold a share about 67%. In terms of product type, hollow fibre membrane oxygenator is the largest segment, occupied for a share of 79%, and in

terms of application, respiratory has a share about 53 percent.
