The global Metal-free NAO Brake Pads market size is predicted to grow from US$ 2843 million in 2025 to US$ 3471 million in 2032; it is expected to grow at a CAGR of 2.9% from 2026 to 2032.

Metal-free NAO brake pads are brake pads that do not contain any metal components, such as copper, steel, or other metallic materials. Instead, they are made from non-metallic materials, such as organic compounds, aramid fibers, and other synthetic materials. These brake pads are designed to provide quieter braking performance and reduce brake dust compared to traditional metallic brake pads. They are also often marketed as being more environmentally friendly, as they do not release metal particles into the environment during braking.

Metal - free NAO brake pads are becoming increasingly popular in the global market due to their environmental - friendly and high - performance characteristics. Metal - free NAO brake pads are made of organic materials such as rubber, glass, and resin, without the use of harmful substances such as asbestos. With the world's increasing emphasis on environmental protection and the continuous improvement of vehicle emission standards, the environmental - friendly characteristics of these brake pads make them more in line with market demands.

Electric vehicles are highly dependent on regenerative braking systems, and metal - free NAO brake pads can provide a quieter braking experience and less dust production, which is very suitable for the characteristics of electric vehicles. With the rapid growth of the electric vehicle market, the demand for this type of brake pads is also increasing.

Although metal - free NAO brake pads may not have the same heat resistance as semi - metallic brake pads, they can provide stable braking force in normal driving conditions, and have the advantages of low noise and less wear on the brake disc, which can improve the overall driving experience, so they are widely used in passenger vehicles.

From the perspective of application, metal - free NAO brake pads are mainly used in the passenger vehicle market, because passenger vehicles have higher requirements for noise and comfort, and the low - noise and low - dust characteristics of NAO brake pads can well meet these requirements. At the same time, with the development of the logistics industry, some light commercial vehicles are also beginning to use NAO brake pads to improve driving comfort and reduce maintenance costs.
