Metal friction pads are metal components used to fill gaps, adjust dimensions, or reduce friction in metal structures. They are usually made of metal materials (such as stainless steel, aluminum alloy, etc.), have a thin thickness, and have a certain hardness and wear resistance. Metal friction pads are commonly used in the engineering and manufacturing fields, especially where precise dimensional adjustment is required, reducing vibration or noise, and improving structural stability. They can play a role in mechanical assembly, automobile manufacturing, aerospace, building structures and other fields. Metal friction pads usually have certain surface treatments to improve their surface smoothness, reduce friction loss, and usually have certain corrosion resistance. Their size and shape are usually determined according to the specific application requirements and can be round, square, rectangular, etc.

United States market for Metal Friction Shims is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Metal Friction Shims is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Metal Friction Shims is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
