The global Metal Shear Dampers market size is predicted to grow from US$ 82.7 million in 2025 to US$ 100 million in 2031; it is expected to grow at a CAGR of 3.2% from 2025 to 2031.

Metal shear dampers utilize the yield strength and ductility characteristics of metal materials to dissipate the energy of structural vibration through shear deformation. When the structure is subjected to external forces (such as earthquakes, wind loads, etc.) causing vibration, the shear plates in the metal shear damper (usually made of low yield point steel, such as soft steel) will undergo shear deformation. This deformation causes lattice friction and plastic deformation inside the metal, converting vibration energy into thermal energy and achieving the effect of shock absorption.

United States market for Metal Shear Dampers is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Metal Shear Dampers is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
