Mid-Wheel Drive Power Wheelchair is a type of electric wheelchair in which the primary drive wheels are centrally located beneath the user's center of gravity. It typically features a six-wheel configuration, with two large drive wheels in the middle and two smaller caster wheels at both the front and rear. This structural design allows the wheelchair to rotate nearly around its own center, resulting in an exceptionally tight turning radius. As a result, mid-wheel drive wheelchairs offer excellent indoor maneuverability and flexibility, making them particularly well-suited for environments with limited space and frequent directional changes, such as hospital rooms, residential settings, and rehabilitation centers.
