Package-on-Package (PoP) solder paste is a soldering material used in stacked packaging technology, especially for stacking multiple chip packages together to achieve higher density integration. PoP solder paste is commonly used in consumer electronics products such as smartphones, tablets, and IoT devices, which can effectively save space and improve performance. In the assembly of stacked package (PoP), solder paste is usually printed onto the substrate first, and then the logic chip is placed on the solder paste. After immersing the packaged memory in a dedicated stacked package (PoP) flux or solder paste, place it on top of the logic chip. Then reflow the entire component. The entire process adopts a no wash process.
