The global Polymer Embolic Microspheres market size is predicted to grow from US$ 291 million in 2025 to US$ 406 million in 2031; it is expected to grow at a CAGR of 5.7% from 2025 to 2031.

Polymer embolic microspheres are tiny, spherical particles made from biocompatible polymers, commonly used in medical treatments, particularly in interventional radiology and oncology. These microspheres are primarily employed in embolization procedures, where they are introduced into blood vessels to block or occlude the flow of blood, thereby cutting off the supply to tumors, abnormal blood vessels, or other target areas. The polymer microspheres are typically loaded with drugs or other therapeutic agents to provide a targeted and controlled release, offering a dual function of both embolization and localized drug delivery.

United States market for Polymer Embolic Microspheres is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Polymer Embolic Microspheres is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
