Precast construction components refer to building elements that are fabricated in advance in factories or on-site and then transported to the construction site for assembly. These components include precast concrete elements such as wall panels, floor slabs and staircases, steel structure components like steel beams and columns, as well as wooden structure components. With standardized design and industrialized production, they have the advantages of stable quality, high production efficiency, energy conservation and environmental protection. They can significantly shorten the on-site construction time and improve the overall quality and efficiency of building construction. They are an important part of prefabricated buildings and enable the rapid assembly and delivery of buildings for use.
